FIT & FUNCTION

## About FITec

Fitness is not a destination it is a way of life. As we are stepping into the second decade of 21st century, more and more people are becoming aware of the importance of living a healthy & fit life. We as human to live a healthy life means to become more active in many activities and be aware of our diet. Among all of the things we have long neglected are what we wear on our feet and the importance of our feet. We stand, walk and run on our feet, yet most of us lack some basic understanding of how bio-mechanics work in our feet. Feet are the foundation of the body! We chase for comfort and more cushion under the feet yet ignore the simple fact that our whole body works in unity. Many parts of the body relies on one another, they require support where the support is due, e.g, the arch of the foot, or a relief or cushion, e.g heel pad, to reduce the force on heel strike. A good pair of shoes will help with many functions as we move around and about. FITec shoes are designed with 3 decades of experience in orthotics and bio-mechanics. Every style we carry are designed with the idea that each shoe has its intended function, while providing the ultimate comfort!
